# Welcome dashboard for LENA Home

The LENA Home welcome dashboard shows a few key performance indicators for all active Home groups within your selected context. Markers on each dial show program goals for comparison.

Seeing something different?

If you are managing multiple types of LENA programs, your welcome dashboard will look more like the image shown here.

Adjust the context menu to see the welcome dashboard for a particular partner organization, or click any medallion to see more details for all programs.

Welcome dashboard access and navigation

When you log in to LENA Online, the welcome dashboard shows three metrics for the highest organization or group you have access to.

Change the **context dropdown** to see the same high-level metrics for a different partner organization, or for a specific group.
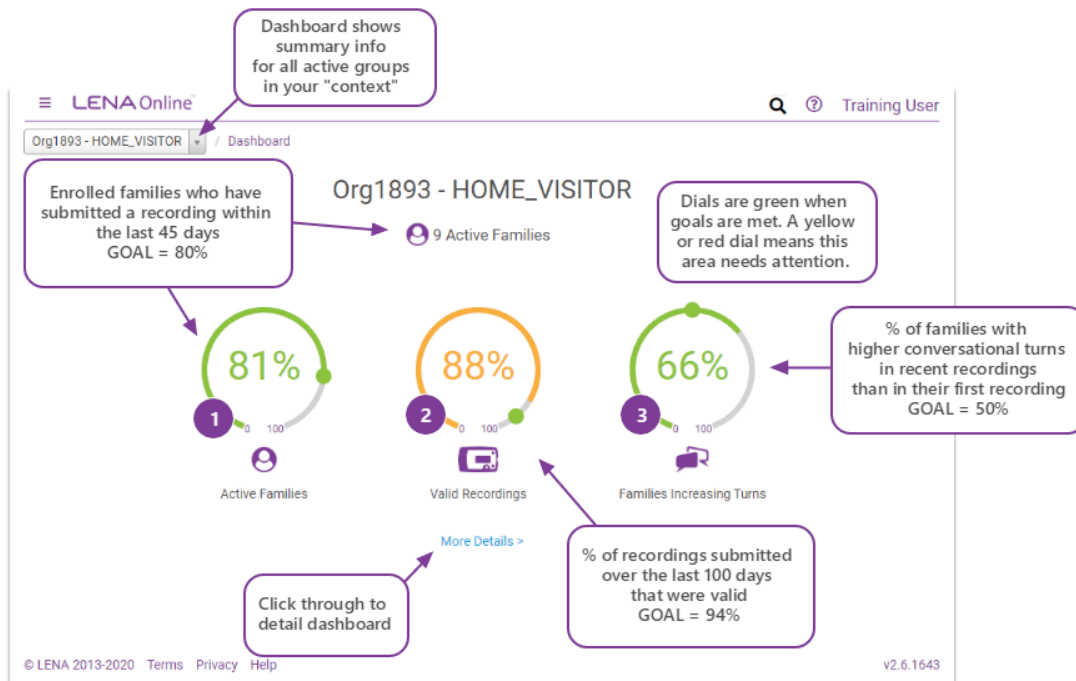

From the organization welcome dashboard, click on any medallion or on **More Details** to go to the organization detail dashboard.

From a group welcome dashboard, click on any medallion or on **More Details** to go to the group detail dashboard.

💡 **Navigate back to the welcome dashboard from any screen by clicking the LENA Online logo in the upper left. This takes you to the welcome dashboard for the current context.**

Welcome dashboard contents

Click any item below for more information on what it means.

1. Active Families

An **Active Family** represents an enrolled participant with at least one valid recording within the last 45 days, **or** a new participant enrolled within the last 45 days without a recording. Because frequent feedback is vital to the success of your program, the goal is high.

Goal: 80% of enrolled families have completed a recording in the past 45 days

2. Valid Recordings

Valid Recordings are recordings that are long enough to represent a full day of the child's language environment, generating percentiles for words and turns. This measure is *current*, not cumulative.

Goal: 94% of recordings submitted in the last 100 days are valid

---

3. Families Increasing Turns

Families Increasing Turns are [active families](#) who are producing more conversational turns in their recent recordings than they did on their first recording.

This measure counts only families who have submitted at least four valid, non-hidden recordings. For each eligible family, we average the data underlying the Turns PCTL for their **most recent three valid recordings**, and compare that average against the same information from their **first valid recording**. If the current average is higher than the first recording, the family is increasing turns.

GOAL = 50% of active families with 4+ recordings are increasing turns
